

Emery Utah
Jan. 8, 1964

Report Water management 1963.

I went to work May 1st 1963 Checking the Canal.

At the beginning of the season there was 30 second feet, by the last of May there was 82 second feet of water.

We put all the flow of the creek into the canal.

80 percent went to Emery canal.

20 percent went to Independent.

June went the same way.

July 10 opened res. 16 second feet this brought 58-81. S.f.

July 18. opened Julius res. 16 S.f. 58-81 S.f.

July 23. I had the cattle rider open 10 turns 3 second feet.

July 27 The rider opened 10 more turns I paid him \$2.50, a time I turned in time for this, and received my money back.

July 31 I met Mr Ward and went over the Canal system with him Aug 5 it rained.

We had a very good year, the water held up good until the rains came.

Aug. 24 - I went with Emery Canal Co. up to check on pipe to put in diversion it continued to rain during Aug. month.

The farmers got three cuttings of hay, the yield was very good.

We had some time with Larson's res. The leaves clogged it off, we had a hard time getting this unplugged, The valve was broken they tried to fix it but failed. This is my Report.
